# Specialty Foams for Automotive, Industrial and Comfort Applications

# A World of Foam

## **Trendsetting market leader in polyurethane foam technology**

FoamPartner is a leading producer and converter of best-in-class foam solutions. Our range of products comprises over 200 polyether and polyester PUR foams for automotive, industrial, and comfort applications. Top quality standards at our global production and conversion sites ensure that our products meet our customers' highest demands for performance, functionality, and aesthetics.

## **Best-in-class foam solutions are developed jointly with our clients**

FoamPartner is structured into five business units, driving innovation and growth by leveraging market and application know-how globally: Acoustic & Thermal Solutions, Automotive Rolls, Systems, Specialties, Living & Care.

For the automotive sector, FoamPartner offers acoustically and thermally effective components for sound absorption in vehicle interiors or exterior areas, such as for engine compartments, transmission tunnels, and bulkheads. Automotive rolls of a length of up to 120 meters are the foams of choice for use in vehicle interiors, such as for headliners, seats, and door panels. Furthermore, FoamPartner also offers two-component PUR foam systems for the mobility sector, covering the entire spectrum of system formulations, from flexible to integral and rigid foam solutions.

As foams are versatile materials, our products are also used in manifold industrial applications, ranging from sponges for professional and household cleaning or polishing pads for paint treatment, to foams for ceramic filters used in metal processing or packaging systems for the watch and jewelry industry – just to name a few examples. FoamPartner is able to provide a diverse range of functional foam solutions for many other industrial applications.

For comfort and care applications, FoamPartner designs, manufactures and processes a wide range of custom foam cores for innovative and ergonomic mattresses and pillows. High-level sleep or sitting comfort, excellent quality, and variable firmness and density allows for all kinds of options for implementation. Furthermore, as an all-around-solution provider, customers can also benefit from logistic and marketing concepts.

### **Acoustic & Thermal Solutions**

Competence in tailored lightweight solutions

### **Automotive Rolls**

Innovation and efficiency

### **Systems**

Agility and customization is our promise

### **Specialties**

Innovator in technical foam applications

### **Living & Care**

All-in-one foam solutions for comfortable sleep

# Core Portfolio of Foams

Polyester and polyether PUR foams are versatile materials and therefore useful for a variety of applications. The defining characteristics of our polyester PUR products include their impact-absorbing properties, excellent resistance to aging, and high compression load deflection. Polyether PUR foams are known for their outstanding thermal insulation properties, distinct hydrolysis stability, and very high resilience.

# Acoustic and Thermal Solutions for Automotive Applications

FoamPartner offers acoustically and thermally effective components for automotive interior and exterior applications. We manufacture flexible and semirigid polyether PUR as well as polyester PUR foams. We also work with renowned partners in order to provide further customer-specific materials such as melamine foams or processes such as lamination. Our foam solutions are particularly light, making them suitable for thermoforming. They absorb noise and boast outstanding fire-retardant properties. Thanks to their light weight and high inherent stability, these foams are ideal for vehicle interiors and exterior engine bays in both cars and trucks. Additional advantages include their optimal acoustic properties and excellent suitability for processing.

# Automotive Rolls

FoamPartner develops and produces automotive rolls in lengths of up to 120 meters for use in headliners, seats, door panels, and other interior vehicle applications. Our portfolio comprises polyester and polyether PUR foams in a wide range of densities to meet any specific need of the automotive industry. Our low-emission polyester PUR foams are characterized by their excellent homogeneous surface optics and good haptic properties, enabling a “soft touch” feeling. Depending on their use in headliners or seat applications, the products are available either with a fine-cell or open, crushed-cell structure. High elongation, proper thermoforming, and good recovery in critical radii are further properties of our products. Our polyether foams offer low fogging properties and are easy to process, allowing either flame or glue lamination. A flame-protected finish can be offered if required. We also produce special polyether foams that have homogeneous and fine cells like a PUR ester. This kind of foam is especially for use with headliner applications.

# Sealing Foams for Industrial Applications

Sealing foams are used in many different sectors, including the automotive, appliance, and construction industries. Their main purpose is to protect equipment or machinery against liquid and volatile compounds such as water, moisture, gases, and fine particles, which could leak or penetrate into the system. Innovative materials are a must in these situations, and our sealing foams meet the most current requirements and highest standards. Our foams have extremely fine pores and are airtight, water tight, and easy to compress. They provide excellent sealing properties even under demanding conditions.

# Specialty Foams for Construction

For the building industry we offer special foams for thermal and acoustic insulation. Our polyether-based PUR isolation foams were developed, for example, for joint sealing tapes for the insulation of windows and doors. The products are characterized by high UV light, moisture and heat resistance and are ideally suited for impregnation processes in silicone solutions.

For the acoustic insulation of buildings, rooms and other building components, we offer sound-absorbing polyethylene foams which, thanks to their closed-cell pore structure, meet the highest sound insulation class and are therefore particularly suitable for use in public buildings or road construction. The ultra-light material is water and weather resistant and is very easy to handle and install.

# Filtration Foams

FoamPartner supplies specialty foams for various filtration applications. Untreated foams are mainly used for liquid and gas filters. Typical applications include air filters, active charcoal filters for air-conditioning systems, water filters for aquariums, and reservoir filters for stamping pads. Processed foams are normally utilized as a carrier medium; for example, in ceramic filters, catalysts, and battery electrodes, the filtration foam serves as a matrix. The requirements for filtration foams are very high, with homogeneity in particular having a fundamental impact on the effectiveness of the end product.

# Sponge Foams

Our customers benefit from one of the broadest ranges of color-proof sponge foams for professional and household cleaning in the world. Our products feature excellent absorption and retention properties for liquid media due to their hydrophilic nature, to make cleaning convenient and efficient. They are great for wiping and efficiently picking up dirt and moisture, while at the same time being ideal for soaking up and retaining liquids. With a wide selection of volumetric weights and pore sizes, FoamPartner sponges are used for a variety of cleaning purposes, including hand dishwashing, surface cleaning, and personal hygiene. More robust specialty foams are required for professional applications, such as manual labor in the construction or ceramics industry.

# Foams for Surface Treatment

The main purpose of foams for surface treatment is to apply liquid media in order to equalize unevenness or generate certain effects on surfaces. FoamPartner offers prepolymer polyester PUR foams that are able to withstand high mechanical loads. Their excellent abrasion, rip, and tear resistance levels make them extremely resilient. They are therefore especially suitable for use as polishing pads, as well as in paint rollers or shoe polish applicators.

They are characterized by a high tear resistance, uniform surface quality, and outstanding long-term stability. Depending on their specific application, these foams can have extremely fine pores or “natural” pores and be solvent resistant, antibacterial, or lightfast.

# Packaging Solutions

FoamPartner provides individual packaging solutions for applications such as case liners and production trays. Foam packaging should not only protect the packed goods from damage and external influences, but also ensure attractive presentation – this is especially important for valuable goods such as jewelry or crystal glass. By combining our expertise in product packaging design with state-of-the-art processing technology, we are able to support our customers at every step when processing, developing, and realizing tailor-made solutions. Polyethylene foams as well as polyether PUR foams are the materials of choice for our packaging systems.

# Foams for Comfort and Care Solutions

FoamPartner develops, designs, manufactures, and processes a broad range of personalized system solutions for exceptional comfort and the highest level of ergonomics. Our portfolio includes, among others, standard and fire-retardant polyether PUR foams, very breathable viscoelastic foams, and gel materials with cooling effects. Our specialty foams are highly recommended due to their outstanding resilience and climate-regulating properties. Very high resilience climate foams (EvoPoreVHRC) are the latest generation of premium comfort foams for royal sleeping comfort and excellent ergonomic support. Thanks to its first-class climate consistency, the premium foam maintains excellent stability and consistent support throughout the night – and for years to come.
